01 Why Your Footage Matters

Understanding the critical importance of quality match footage

The Power of Video in Modern Scouting

In today's football landscape, your match footage is your most powerful weapon. Before a scout ever sees you play in person, before they read your name on a CV, before they hear about you from an agent — they watch your video. This is the reality of modern football recruitment, and understanding it is the first step toward getting scouted.

Consider this: professional clubs receive hundreds, sometimes thousands, of player applications every month. Scouts and recruitment teams simply don't have the time to attend every trial or watch every player in person. Instead, they rely on video footage to filter through candidates and identify those worth pursuing further. Your footage is your first impression, your opening statement, your chance to prove you deserve attention.

Figure 1: *Modern scouts analyze player footage using advanced video analysis tools before making decisions*

Key Insight

Studies show that scouts make their initial assessment within the first 30 seconds of watching a player's highlight video. This means your opening clips must be absolutely explosive — they need to grab attention immediately and make the scout want to see more.

What Scouts Look For in 30 Seconds

Understanding the scout's perspective is crucial. When a scout presses play on your video, they're asking themselves several questions within those first critical seconds:

- **Is the video quality professional?** Poor footage suggests a lack of seriousness and makes it difficult to assess your abilities accurately.
- **Can I clearly identify the player?** If the scout can't tell which player is you, the footage is useless.

- **What position does this player play?** Your clips should clearly demonstrate your primary position and role.
- **What's their standout quality?** Every player needs a "hook" — something that makes them memorable.
- **Are they playing at a competitive level?** The quality of opposition and game context matters.

The harsh truth is that if your video doesn't answer these questions quickly and convincingly, the scout will move on to the next candidate. The football world is competitive, and attention spans are short. Your footage needs to work hard for you from the very first frame.

The Difference Between Good and Great Clips

There's a significant difference between simply having footage and having footage that gets results. Good clips show what you can do. Great clips show what you can do in a way that makes scouts excited to see more. Here's what separates the two:

Aspect	Good Clips	Great Clips
Video Quality	Clear enough to see the action	Professional HD quality with stable camera work
Player Visibility	You can be identified	You're clearly highlighted with arrows/circles when needed
Clip Selection	Shows various skills	Shows your BEST skill repeatedly from different games
Context	Actions are visible	Actions show impact on the game (goals, assists, key plays)
Length	Reasonable duration	Precisely timed (6-13 seconds) for maximum impact

Pro Tip

Think of your footage as a movie trailer, not the full movie. A trailer shows only the most exciting moments to make people want to see the full film. Your clips should do the same — showcase only your absolute best moments that leave scouts wanting to see you play in person.

02 What Footage You Need

Understanding the requirements for professional-quality submissions

Match Footage Requirements

The golden rule of footage submission is simple but non-negotiable: **only match footage matters.** Training videos, juggling clips, and individual drills have their place in your development, but when it comes to getting scouted, scouts want to see you in real game situations against real opposition.

Here's what you need to collect:

Essential Footage Checklist

- ✓ Videos from real games you played in (record the full game when possible)
- ✓ The absolute best games you've had — your standout performances
- ✓ Footage that is NOT shaky, dark, or poor quality
- ✓ Clips where your full body is visible with some of the pitch context
- ✓ Raw footage without music or effects (we'll add those later)
- ✓ High-quality recordings (1080p minimum preferred)

Good vs Bad Footage

Understanding what makes footage usable versus unusable is critical. Let's break down the differences:

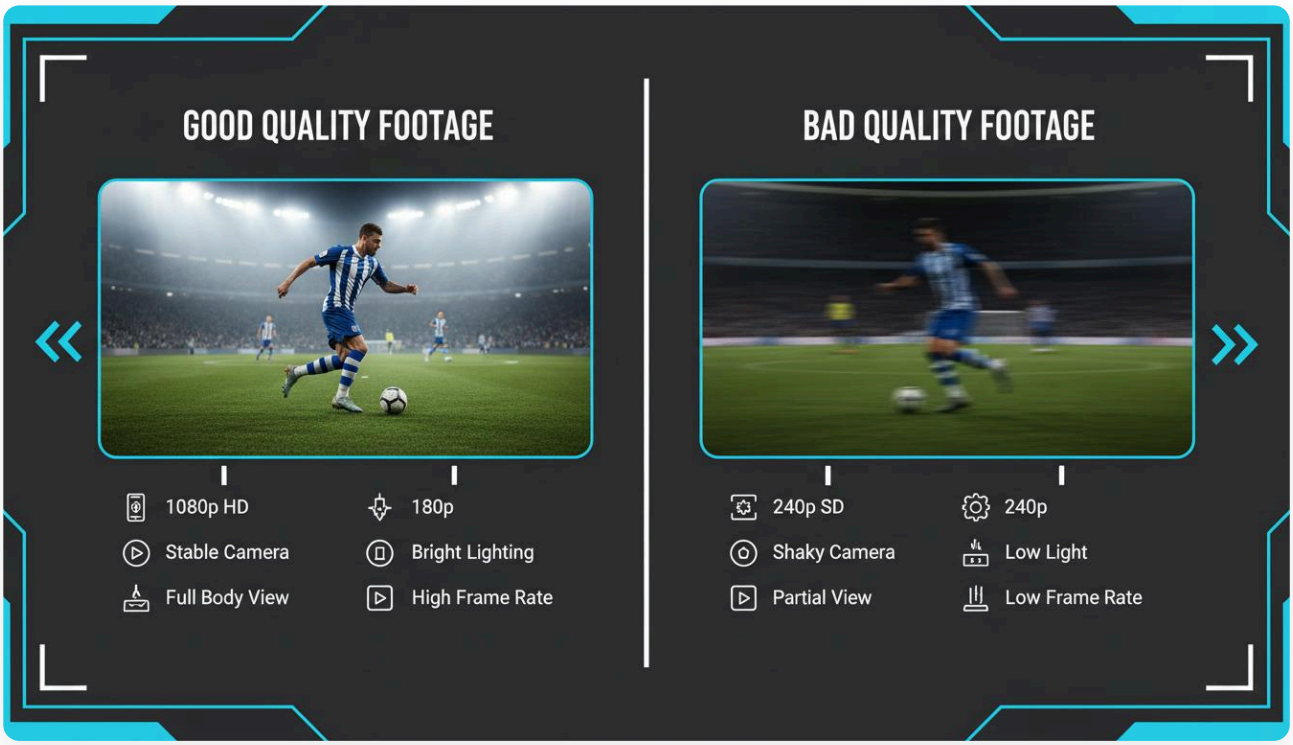

Figure 2: *Visual comparison showing the difference between professional-quality and poor-quality footage*

Type	Send This	Don't Send This
Game Type	League matches, Tournament games, Full 11v11 friendlies	Small-sided games, Training scrimmages
Content	Match action with opposition	Individual training drills, Just juggling, Practice sessions
Quality	1080p HD, Stable camera, Good lighting	240p/480p, Shaky footage, Dark or overexposed
Editing	Raw footage, Clean cuts	Heavy filters, Music overlays, Special effects
Camera Position	Sideline or elevated view showing pitch context	Behind the goal only, Too far to identify players, Zoomed in too close

Important Warning

Sending poor quality footage can actually hurt your chances more than sending nothing at all. Bad footage suggests you either don't take your career seriously enough to invest in proper recording, or you don't have access to competitive games. Neither impression helps you get scouted.

Recording Setup Guide

If you're responsible for recording your own games or arranging for someone to do it, understanding proper setup is essential. Here's how to ensure you get usable footage:

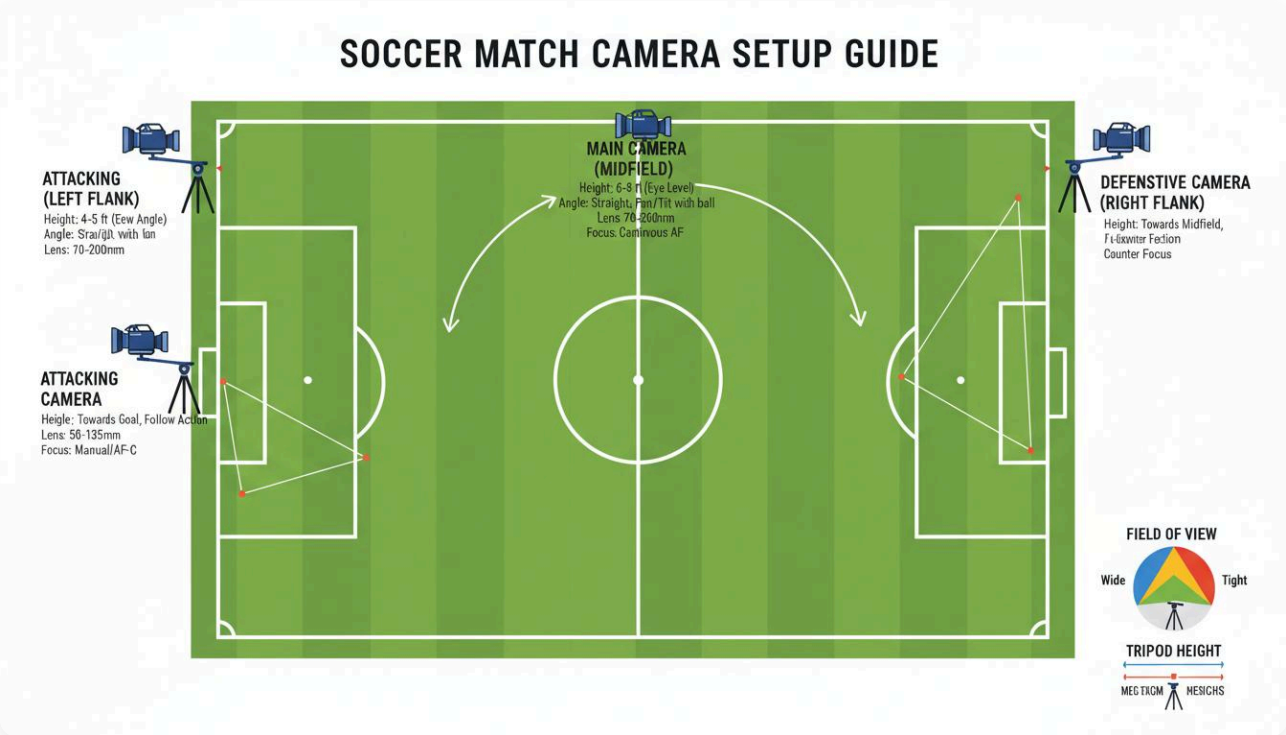

Figure 3: *Optimal camera positioning for capturing match footage*

Camera Position Guidelines

- **Height:** Elevated position when possible (bleachers, stands, or a raised platform). Ground-level footage can work but is less ideal.

- **Angle:** Center field or slightly toward your playing side. The camera should capture a wide view of the action.
- **Stability:** Use a tripod whenever possible. Shaky handheld footage is difficult to watch and unprofessional.
- **Zoom:** Wide enough to see multiple players and pitch context. You can zoom in on individual clips later during editing.

Equipment Recommendations

You don't need professional equipment to get good footage, but some basics help:

Item	Minimum	Recommended
Camera	Smartphone (1080p)	DSLR or professional camcorder
Tripod	Basic phone tripod	Full-height tripod with phone mount
Storage	16GB free space	32GB+ or external storage
Battery	Fully charged	Portable charger/power bank

03 What If You Don't Have Footage?

Starting from scratch and building your clip library

Starting From Scratch

If you're reading this and realizing you don't have any usable footage, don't panic. Every professional player started somewhere, and building your clip library is a process. The key is to start immediately and be systematic about it.

Here's the reality: you can't get scouted without footage, and you can't get footage without playing in recorded games. This means your first priority should be ensuring your upcoming games are recorded. Here's how to make that happen:

1. **Talk to Your Coach or Manager**

   Explain your goals and ask if the club can arrange to record games. Many clubs already record matches for tactical analysis — they just need to share the footage with you.

2. **Ask a Parent, Friend, or Teammate**

   Someone you trust can record from the sidelines using a smartphone. Even basic footage is better than nothing when you're starting out.

3. **Hire a Local Videographer**

   If budget allows, hire someone to record your games professionally. This is an investment in your career.

4 **Check if Your League Records Games**

Some leagues record matches for their own purposes. Contact the league administration to see if footage is available.

Getting Your Games Recorded

If you need to arrange recording yourself, here's a practical approach:

Option 1: The Parent/Friend Method (Budget: Free)

This is how many players start. Find someone reliable who attends your games anyway and ask them to record. Provide them with:

- A simple tripod for their phone (inexpensive on Amazon)
- Clear instructions on positioning (center field, elevated if possible)
- A schedule of your games so they know when to come
- Gratitude — maybe buy them coffee or thank them publicly

Option 2: The Local Videographer (Budget: $50-150 per game)

Many areas have freelance videographers who record local sports. Search for "sports videographer [your city]" or check platforms like Fiverr. Professional footage gives you a significant advantage.

Option 3: The Club/Team Investment (Budget: Varies)

If your club doesn't currently record games, propose it as a team investment. The footage benefits everyone — not just you. Many clubs have started recording once a player shows the value it provides.

> **Timeline Expectation**
>
> Building a solid clip library typically takes 3-6 months of recorded games. Don't expect to have everything you need overnight. Focus on getting at least one game recorded as soon as possible, then build from there. Quality over quantity — five

> great clips from one excellent game are better than twenty mediocre clips from multiple games.

Building Your Clip Library

Once you start getting games recorded, you need a system for building your library. Here's the process:

1. **After each recorded game,** review the footage within 24-48 hours while it's fresh in your memory.
2. **Identify your best moments** — plays you're proud of that show your strengths.
3. **Note the timestamps** of these moments for easy reference later.
4. **Save the full game footage** in an organized folder system (we'll cover this in detail later).
5. **Cut your best clips** as soon as possible after the game.
6. **Add new clips to your collection** and continually refine which ones represent you best.

Remember: your clip library is a living document. As you play more games and improve as a player, you'll replace older clips with better ones. The goal is to always have your current best work ready to showcase.

04 Actions to Showcase

Identifying and highlighting your signature skills

Identifying Your Signature Skills

Every player has something that makes them special — your "signature skill." This is what scouts will remember about you after watching your footage. Your job is to identify what that skill is and make sure your clips showcase it prominently.

Figure 4: *Key soccer actions that scouts look for in highlight footage*

Here are the main categories of actions to consider:

Technical Skills

- **Dribbling:** Beating defenders 1v1, quick turns, skill moves in tight spaces
- **Passing:** Through balls, switching play, one-touch passes under pressure
- **Shooting:** Goals from various positions, powerful strikes, volleys
- **First Touch:** Controlling difficult balls, bringing ball under pressure
- **Aerial Ability:** Winning headers, defensive clearances, attacking headers on goal

Tactical Awareness

- **Movement Off the Ball:** Making runs behind defense, showing for passes, creating space
- **Positioning:** Being in the right place at the right time, covering spaces
- **Vision:** Seeing passes others don't, anticipating play development
- **Decision Making:** Choosing the right option quickly under pressure

Physical Attributes

- **Pace:** Sprinting with the ball, recovering defensively, beating players for speed
- **Strength:** Holding off defenders, winning physical duels, aerial battles
- **Stamina:** Pressing throughout the game, covering ground, late-game performance
- **Agility:** Quick changes of direction, balance under pressure

Mental Attributes

- **Work Rate:** Tracking back, pressing, recovering lost balls
- **Leadership:** Organizing teammates, communication, taking responsibility
- **Composure:** Keeping calm under pressure, making good decisions in big moments

Position-Specific Highlights

Different positions should emphasize different skills in their footage. Here's what scouts typically look for by position:

Position	Key Actions to Showcase
Goalkeeper	Saves (especially difficult ones), distribution (throws/kicks), commanding the box, 1v1 situations, organizing defense
Center Back	Tackles and interceptions, aerial duels, building from the back, positioning, reading the game
Full Back	1v1 defending, overlapping runs, crosses, recovery runs, combination play with wingers
Defensive Midfielder	Breaking up play, screening the defense, simple effective passing, positioning, winning second balls
Central Midfielder	Passing range, receiving under pressure, vision, work rate, arriving late in the box
Attacking Midfielder	Through balls, creativity in final third, goals, assists, link-up play, dribbling in tight spaces
Winger	1v1 attacking, crossing, cutting inside, goals, assists, tracking back defensively
Striker	Goals (various types), movement off the ball, hold-up play, pressing, combination play

The Repetition Principle

Here's a crucial insight that many players miss: **repetition builds belief.** Scouts don't just want to see that you CAN do something — they want to see that you can do it CONSISTENTLY.

This means your footage should show the same skill multiple times, ideally from different games. If you're a fullback who wins every 1v1 duel, show 5-6 examples from different matches. If you're a winger with great crossing, show that ball whipping into the box over and over. If you're a midfielder with excellent vision, show multiple through balls that split defenses.

The 10-20 Clip Rule

We recommend gathering 10-20 individual clips total. Within these clips, double down on what you do best. If you're strongest at dribbling past defenders, include 4-5 clips of that. If passing is your strength, show 4-5 excellent passes. Don't try to cover every possible skill — focus on what makes you special.

> *"I'd rather see a player do one thing exceptionally well ten times than ten different things averagely. Specialization shows confidence and identity."*
>
> **— Professional Scout, Premier League Club**

05 How to Edit Your Clips

Creating professional highlight clips that grab attention

CapCut Editing Guide

For editing your clips, we recommend using CapCut. It's the same software our team uses for professional player highlight videos, and it offers the perfect balance of power and ease of use. Best of all, it's free and available for both PC and Mac.

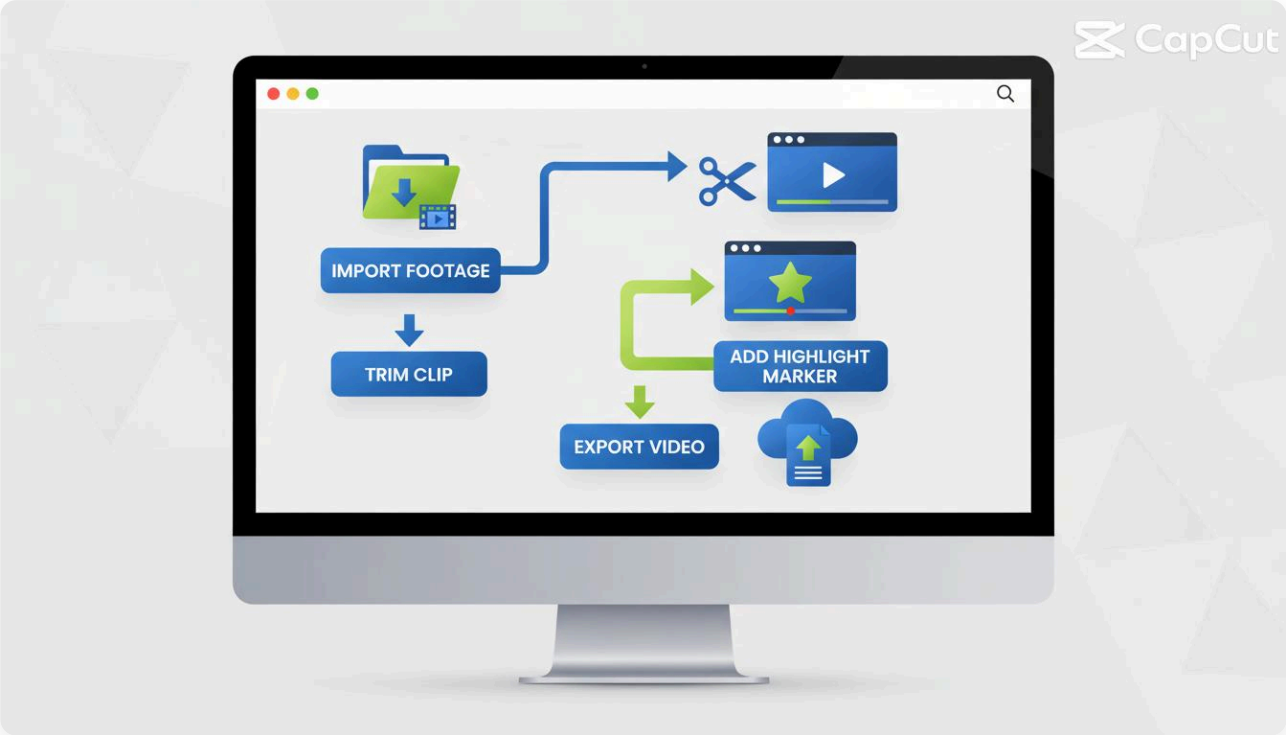

Figure 5: *The video editing workflow for creating professional highlight clips*

Getting Started with CapCut

1. Download CapCut from the official website (capcut.com) — use the PC version, not mobile
2. Import your full game footage into a new project
3. Watch through and identify your best moments
4. Use the split tool to cut out individual clips
5. Export each clip separately

Clip Length and Timing

The length of your clips is critical. Too short and you don't show enough context. Too long and you lose the scout's attention. Here's the formula that works:

> **The 6-13 Second Rule**
>
> Each individual clip should be between 6 and 13 seconds long. This is long enough to show the context (where you receive the ball, the situation), the action (what you do), and the result (the outcome of your action).

Timing Your Clips

Here's how to time your clips for maximum impact:

- **Start point:** Begin 2-3 seconds BEFORE you receive the ball or the action starts. This gives context.
- **The action:** The main event should happen in the middle of the clip.
- **End point:** End 2-3 seconds AFTER the action completes. Show the result — the pass reaching its target, the shot on goal, the tackle winning the ball.

Example Timing Breakdown

Phase	Duration	What to Show
Setup	2-3 seconds	You positioning, ball coming toward you, opponents around you
Action	3-5 seconds	Your skill — dribble, pass, shot, tackle, etc.
Result	2-3 seconds	The outcome — goal, completed pass, won duel, etc.
Total	**6-13 seconds**	Complete story of the play

Making Yourself Visible

One of the most common problems with player footage is that scouts can't tell which player is you. This is especially true in wide shots where everyone is wearing the same kit. Here's how to solve this:

Using Visual Markers

CapCut allows you to add visual elements to your clips. Use these tools to highlight yourself:

- **Circles:** Draw a circle around yourself at the start of the clip so scouts know who to watch.
- **Arrows:** Use arrows to point to yourself in crowded scenes.
- **Highlight effect:** Some editors allow you to slightly dim the background while keeping yourself bright.

> **Pro Tip**
>
> Don't overdo the effects. A simple circle or arrow at the beginning of the clip is usually enough. The goal is to help scouts identify you quickly, not to create a music video. Keep it clean and professional.

Additional Editing Guidelines

- **No music:** We'll add appropriate music during the final highlight video production.
- **No transitions:** Export clean clips without fades, wipes, or other transitions.
- **No filters:** Keep the footage natural and unfiltered.
- **No text overlays:** Don't add text descriptions to individual clips.
- **Consistent quality:** Export all clips at the same resolution (1080p recommended).

06 Organizing and Saving

Creating a professional file system for your footage

Folder Structure

Organization is key to presenting yourself professionally. A messy, disorganized file collection suggests a messy, disorganized player. Here's the folder structure we recommend:

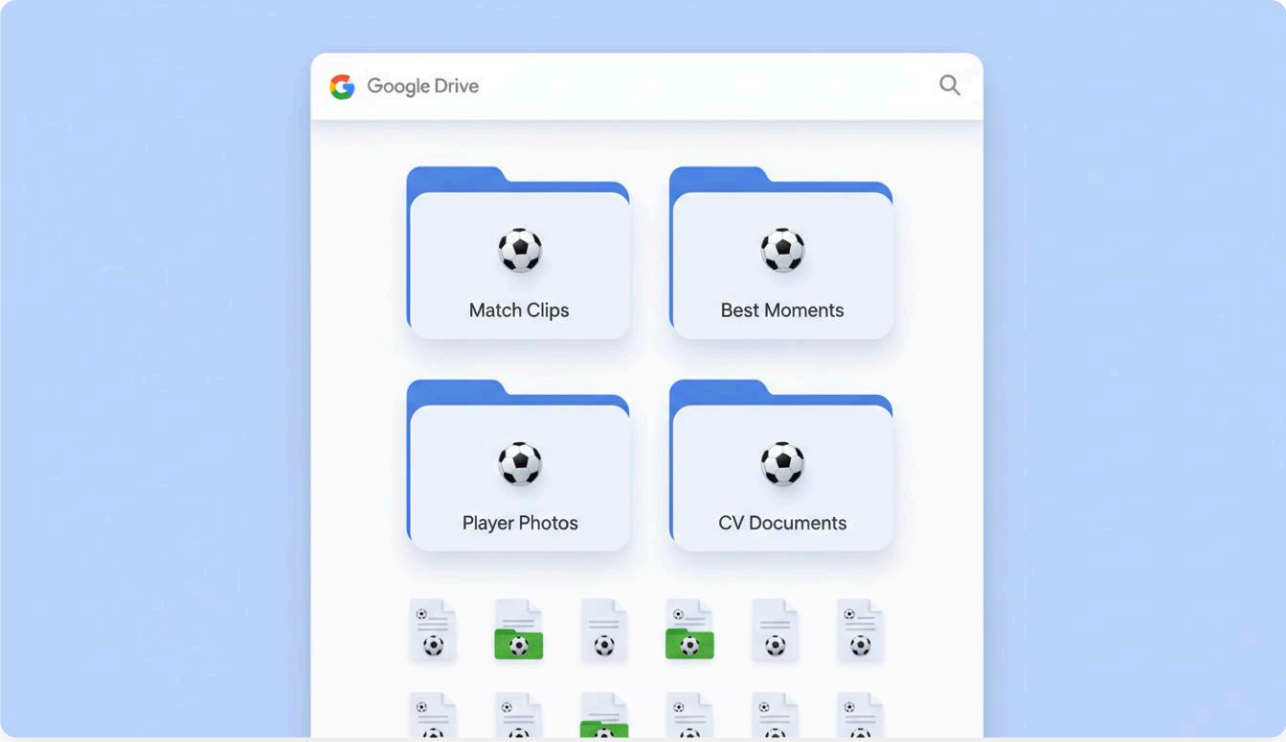

Figure 6: *Recommended Google Drive folder structure for organizing your player portfolio*

Main Folder Structure

Primary Folder Name

Name your main folder using this format: **Firstname_HighlightVideoClips**
Example: **Kwame_HighlightVideoClips** or **Jonny_HighlightVideoClips**

Subfolder Organization

Inside your main folder, create these subfolders:

Folder Name	Contents
01_Full_Games	Complete recordings of your best matches (unedited)
02_Individual_Clips	Your edited 6-13 second highlight clips
03_Player_Photos	Your 6 professional photos (we'll cover these next)
04_CV_Documents	Your player CV in Word and PDF formats

File Naming Conventions

Consistent file naming makes it easy for scouts (and us) to understand what each clip contains. Use descriptive names that clearly identify the skill shown.

Recommended Naming Format

[Number]_[Skill]_[Context].[extension]

Examples:

- `01_Dribble_1v1_Beat_Defender.mp4`
- `02_Pass_Through_Ball_Assist.mp4`
- `03_Shot_Long_Range_Goal.mp4`
- `04_Tackle_Recovery_Win_Ball.mp4`

- `05_Header_Defensive_Clearance.mp4`

Naming Tips

- Use underscores instead of spaces (prevents URL encoding issues)
- Keep names descriptive but concise
- Number your clips to maintain order
- Include the outcome when relevant (Goal, Assist, Won Duel, etc.)

Export Settings

When exporting your clips from CapCut, use these settings for optimal quality:

Setting	Recommended Value	Notes
Resolution	1920x1080 (1080p)	Minimum acceptable quality
Frame Rate	30fps or 60fps	Match your source footage
Format	MP4 (H.264)	Most compatible format
Bitrate	High/Maximum	Better quality, larger file size

Export Each Clip Separately

Don't export all your clips as one long video. We need individual clip files so we can arrange them optimally in your final highlight video. Export each clip one by one with its own filename.

07 Photos You Need

The 6 essential photos for your player portfolio

The 6 Essential Photos

In addition to your video footage, you need to prepare 6 high-quality photos of yourself. These photos serve multiple purposes: they're used in your CV, on your player profile, in presentations to clubs, and across various promotional materials. Think of them as your visual business card.

Figure 7: *The six essential photos every player needs in their portfolio*

Photo 1: Clean Kit Photo

A professional photo of you in your full kit, standing confidently. This should look like a team photo or official club portrait. Clean background, good lighting, serious but approachable expression. This is often the first photo scouts see.

Photo 2: In-Game Action Shot

A dynamic photo of you during a match — dribbling, passing, shooting, or making a tackle. This should capture the intensity and athleticism of real game action. The photo should clearly show you as the main subject.

Photo 3: Training Photo

A photo of you in training gear, showing your work ethic and dedication. This could be practicing drills, working with a ball, or in a training session. It shows you're committed to improvement.

Photo 4: Headshot Portrait

A clean, professional head-and-shoulders portrait. This is used for official documents, ID cards, and profile pictures. Neutral background, good lighting, professional appearance. Smile naturally — be approachable but serious about your career.

Photo 5: Team Photo or Celebration

A photo showing you with teammates — either a formal team photo or a celebration moment (scoring a goal, winning a match). This demonstrates that you're a team player and show positive emotions.

Photo 6: Lifestyle Photo

A more casual photo showing you as a person outside of football. This could be you in casual clothes, with family, or doing a hobby. It humanizes you and shows you have a balanced life. Keep it tasteful and professional.

Photo Quality Guidelines

All photos should meet these quality standards:

Requirement	Standard
Resolution	Minimum 1920x1080, preferably higher
Format	JPG or PNG
Lighting	Well-lit, no harsh shadows or overexposure
Focus	Sharp and clear, you must be in focus
Background	Clean and uncluttered when possible
Expression	Natural, confident, professional

Photo Naming

Name your photos clearly:

```
01_Clean_Kit.jpg
02_Action_Shot.jpg
03_Training.jpg
04_Headshot.jpg
05_Team_Photo.jpg
06_Lifestyle.jpg
```

08 How to Submit

The complete submission process step by step

Google Drive Setup

We use Google Drive for all footage submissions. It's reliable, widely accessible, and allows us to download your files easily. Here's exactly how to set up your submission:

Step 1: Create Your Google Drive Folder

1. Go to drive.google.com and sign in with your Google account (create one if needed)
2. Click the "+ New" button on the left side
3. Select "Folder" from the dropdown menu
4. Name your folder: **Firstname_HighlightVideoClips** (e.g., "Kwame_HighlightVideoClips")
5. Press Enter to create the folder

Step 2: Create Subfolders

Inside your main folder, create these subfolders:

- 01_Full_Games
- 02_Individual_Clips
- 03_Player_Photos
- 04_CV_Documents

Step 3: Upload Your Files

Upload all your prepared files to the appropriate folders:

Folder	Files to Upload
01_Full_Games	Complete match recordings (if available)
02_Individual_Clips	Your 10-20 edited highlight clips (6-13 seconds each)
03_Player_Photos	Your 6 professional photos
04_CV_Documents	Your player CV (Word and PDF versions)

Sharing Instructions

Once everything is uploaded, you need to share the folder with us:

Step 4: Share Your Folder

1. Right-click on your main folder (Firstname_HighlightVideoClips)
2. Select "Share" from the menu
3. In the sharing dialog, click on "Change to anyone with the link"
4. Set the permission to "Viewer" (people can view and download but not edit)
5. Click "Copy link"
6. Send that link to us via email or through the CK Training platform

> **Critical: Check Your Sharing Settings**
>
> Make sure your folder is set to "Anyone with the link can view." If you keep it restricted to specific people, we won't be able to access your files. Always test your link in an incognito/private browser window to confirm it works.

Final Checklist

Before submitting, run through this final checklist:

Pre-Submission Checklist

- ✓ I have 10-20 individual clips, each 6-13 seconds long
- ✓ Each clip is exported in 1080p resolution
- ✓ All clips are clearly named with descriptive filenames
- ✓ I am clearly visible in each clip (circles/arrows added where needed)
- ✓ I have 6 professional photos prepared and uploaded
- ✓ My player CV is complete and uploaded (Word and PDF)
- ✓ All files are organized in the correct folder structure
- ✓ My Google Drive folder is shared with "Anyone with the link can view"
- ✓ I have tested the share link to confirm it works
- ✓ I have included my name and contact information in the submission message

What Happens Next

Once we receive your footage:

1. We'll review all your clips and photos within 48-72 hours
2. We'll provide feedback on your footage quality and selection
3. We'll create your professional highlight video using your best clips
4. We'll build your player CV and profile
5. We'll begin promoting you to our network of scouts and clubs

09 Next Steps

Your journey to professional football starts now

Congratulations — you've just completed one of the most important steps in your football journey. By reading this guide in its entirety, you now understand exactly what it takes to present yourself like a professional player and maximize your chances of getting scouted.

Let's recap what you've learned:

- **Why footage matters:** Your video is your first impression and most powerful tool for attracting scout attention.
- **What footage you need:** Only match footage counts — real games, real opposition, real pressure.
- **How to get footage:** If you don't have it yet, you now know exactly how to start recording your games.
- **What actions to showcase:** You've identified your signature skills and understand the repetition principle.
- **How to edit clips:** You can create professional 6-13 second clips that tell the story of each play.
- **How to organize:** You have a complete folder system and naming convention.
- **What photos you need:** You understand the 6 essential photos for your portfolio.
- **How to submit:** You know exactly how to share your footage with us via Google Drive.

Figure 8: *Your dedication to following this process brings you one step closer to your professional dream*

Remember This

The players who get scouted aren't always the most talented — they're the most prepared. By following this guide, you're proving that you take your career seriously. You're showing scouts, clubs, and agents that you understand what it takes to be a professional. That professionalism, that attention to detail, that commitment to doing things right — that's what separates players who get opportunities from those who don't.

Now it's time to take action. Don't let this guide sit unused. Start today:

1. If you have footage already, begin reviewing and cutting your best clips.
2. If you don't have footage, make arranging recording your top priority.
3. Gather your photos or schedule time to take them.
4. Organize everything according to the folder structure.
5. Submit your complete package to us.

Your dream of playing professional football is possible. Players just like you have used this exact process to get trials, sign contracts, and build careers. The only question is: will you be next?

> *"The difference between a dream and a goal is a deadline and a plan. You've got the plan — now set your deadline and make it happen."*
>
